

Where I am located, there are not many options available as far as radio entertainment is concerned. That is why I choose to pay for satellite radio service. I feel that since I pay for it, the The National Association of Broadcasters should have no say in whether I have this service or not. If they would get off their butts and not get stuck in their paradigms of what we as consumers want, they wouldn't have these problems. If they would spend as much money on upgrading their services as they do on lobbyists, they would be able to compete with satellite radio. I urge that you reject their petition. Thank you.
